IMA EXPLORATION INC Form 6-K May 31, 2006

> UNITED STATES SECURITIES AND EXCHANGE COMMISSION WASHINGTON, DC 20549

> > FORM 6-K

REPORT OF FOREIGN PRIVATE ISSUER PURSUANT TO RULE 13a-16 OR 15d-16 UNDER THE SECURITIES EXCHANGE ACT OF 1934

For the month of May, 2006.

Commission File Number: 001-32558

IMA EXPLORATION INC.

\_\_\_\_\_

(Translation of registrant's name into English)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F: FORM 20-F [X] FORM 40-F []

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1):

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7): \_\_\_\_\_

Indicate by check mark whether the registrant by furnishing the information contained in this Form, is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2 (b) under the Securities Exchange Act of 1934. YES [] NO [X]

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3- 2(b): 82-\_\_\_\_\_

#### SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf of the undersigned, thereunto duly authorized.

#### NEWS RELEASE - MAY 30, 2006

#### UPDATE ON PHASE IV DRILLING FOR IMA'S NAVIDAD

IMA EXPLORATION INC. (IMR-AMEX, IMR-TSX.V) is pleased to announce results from 21 diamond drill holes at its Navidad Silver Project in Patagonia, Argentina, from the Phase IV drilling program that commenced in January of 2006. To date at Navidad IMA has drilled over 53,000 metres, announced the results from 307 diamond drill holes, and defined an Indicated Resource of 305.7 million ounces of silver and 2.9 billion pounds of lead (93.4 million tonnes at 102 g/t silver and 1.41 % lead using a 50 g/t silver equivalent cut-off). Results reported herein include results from the Esperanza Trend and Galena Hill.

Highlights of the drilling at Esperanza Trend include hole NV06-290 with 21.0 metres (m) averaging 272 grams/tonne (g/t) silver including two higher-grade sections of 10.41m averaging 413 g/t silver and 4.43m of 291 g/t silver. Hole NV06-300, also at Esperanza, averaged 800 g/t silver over 2.33m (see Map 1). Phase IV drilling to date has focused on further defining the Calcite NW and Calcite Hill deposits, testing the Esperanza Trend, and as well as infill drilling on Galena Hill for resource estimation purposes and to obtain material for metallurgical testwork.

A portion of the Galena Hill deposit has been drilled on tight centres to allow calculation of the optimal drill spacing to reclassify the current  $\ensuremath{\mathsf{Indicated}}$ Resource as a Measured Resource and to collect additional material for metallurgical testing. The final eight holes of this twenty-three hole program are included in this release. As expected, infill drilling at Galena Hill produced long intercepts of silver and lead mineralization. An example of one of the Galena Hill infill holes is NV06-307 with 135m containing 150 g/t silver and 3.99 percent (%) lead with a higher-grade, upper-part of 50.01m, starting at just 26m depth, that contains 350 g/t silver and 7.92 % lead. Similarly hole NV06-302 produced 127.15m averaging 112 g/t silver and 3.18 % lead including a higher-grade interval of 41.56m averaging 183 g/t silver and 5.85 % lead in its upper portion. For convenience, the silver equivalent values including lead have been shown in the table of results. In many cases the lead accounts for as much as half of the potential metal value at Galena Hill (see formula in the foot notes of table for details of the calculation method). With these results now in hand, the technical work of optimizing drill hole spacing and selection of composite metallurgical samples is underway.

Drilling resumed May 15th after a short break. Prior to the break a total of 11,081m in 56 holes were drilled in Phase IV all of which are now reported on with this release.

A summary of collar locations and hole orientations and lengths is available on IMA's website (WWW.IMAEXPLORATION.COM), as is a summary of IMA's rigorous quality-control and quality-assurance procedures. Dr. Paul Lhotka is IMA's "Qualified Person" at the Navidad project and has supervised all aspects of the current technical program and has reviewed the contents of this release.

ON BEHALF OF THE BOARD

/s/Joseph Grosso

Mr. Joseph Grosso, President & CEO

including		26.00	76.01	50.01	350	7.92

Notes:

- 1. True thickness has not been calculated for these holes.
- 2. All length weighted averages (LWA) are "uncut" ie have no grade capping.
- 3. Silver equivalent calculated using US\$6.00/oz silver and \$0.35/lb lead. (AgEq = Ag + (%Pb\*10,000/250). No attempt has been made to adjust these relative values by accounting for metallurgical recoveries as insufficient information is available to do so. This the same method as used in the resource calculation released on February 16, 2006.
- 4. A complete list of all results to date is available on IMA's website (www.imaexploration.com).
