In accordance with U.S. GAAP regarding fair value measurements, fair value is defined as the price that the Fund would receive to sell an asset or pay to transfer a liability in an orderly transaction between market participants at the measurement date. The U.S. GAAP disclosure requirements establish a framework for measuring fair value, and a three-level hierarchy for fair value measurements based upon the transparency of inputs to the valuation of an asset or liability. Inputs may be observable or unobservable and refer broadly to the assumptions that market participants would use in pricing the asset or liability based on market data obtained from sources independent of the Fund. Unobservable inputs reflect the Fund s own assumptions about the assumptions that market participants would use in pricing the asset or liability based on the best information available in the circumstances. Each investment is assigned a level based upon the observability of the inputs which are significant to the overall valuation. The three-tier hierarchy of inputs is summarized below.

Level 1 quoted prices in active markets for identical investments

Level 2 other significant observable inputs (including quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)

Level 3 significant unobservable inputs (including the Fund s own assumptions in determining the fair value of investments)

The following table summarizes the valuation of the Fund s investments by the above fair value hierarchy levels as of September 30, 2011:

<sup>\*</sup> Other financial instruments are derivative instruments, such as futures, forwards and swap contracts, which are valued at the unrealized appreciation/depreciation on the instrument.

<sup>+</sup> The earlier close of the foreign markets gives rise to the possibility that significant events, including broad market moves, may have occurred between the close of the foreign markets and the time at which the Fund values its securities which may materially affect the value of securities trading in such markets. To account for this, the Fund may frequently value many of its foreign equity securities using fair value prices based on third party vendor modeling tools to the extent available. Accordingly, a significant portion of the Fund s investments are categorized as Level 2 investments.

Following is a reconciliation of investments in which significant unobservable inputs (Level 3) were used in determining fair value. The transfers between levels of the fair value hierarchy assumes the financial instrument was transferred at the beginning of the reporting period.
