Aiming at fulfilling the need for information in the markets in which it operates, the Company's practice is to simultaneously disclose its corporate financial statements and the USGAAP.

The accounting practices adopted in Brazil differ from accounting principles generally accepted in the United States USGAAP applicable to the air transport segment, especially the allocation of maintenance expenses to income. At June 30, 2005, the net income for the period, in accordance with accounting practices adopted in Brazil (BR GAAP), was R\$ 41,686 lower (R\$ 108,819 at June 30, 2004) due to this difference and the respective tax effects in comparison with net income under USGAAP. At this same date, shareholder's equity presented in the Company's financial statements as per Brazilian Corporation Law was R\$175,991 lower due to, mainly, the accumulated difference in the allocation of maintenance expenses and respective tax effects, also as the result of the accrual in USGAAP financial statements of net proceeds received through issuing shares and accounting for share purchase options granted to executives and employees. There are also differences in the classification of assets, liabilities and income items, and the most significant difference is the classification of readily available financial investments. The Company discloses significant information on transactions in a consistent way in the financial statements as per Brazilian Corporation Law and in accordance with USGAAP.

The Company entered into an Agreement for the Adoption of Level 2 Differentiated Corporate Governance Practices with the São Paulo Stock Exchange BOVESPA, starting to be listed on the Bovespa's Novo Mercado index, created to set apart a selected group of companies that undertake to adopt

Considering contract amendments, at June 30, 2005 the Company had placed firm orders for the acquisition of 30 aircraft Boeing 737-800. The firm orders for the aircraft purchase, in the approximate amount of US\$ 1,980 million based on the aircraft list price (corresponding to approximately R\$4,654 million based on the exchange rate of June 30, 2005), have deliveries expected for 2006 (six aircraft), 2007 (thirteen aircraft), 2008 (seven aircraft) and 2009 (four aircraft).

The Company has been making the initial payments related to the acquisition of these aircraft, using its own funds arising from the primary public offering of its shares and loans contracted through short-term credit lines and supplier financing. Future payments referring to firm orders and options for the purchase of 63 aircraft, set forth based on the aircraft price list, determined in US dollars and converted into reais based on the exchange rate of June 30, 2005, have the following breakdown per year:

04.01 - EXPLANATORY NOTES

The managed account of which the Company is a quota holder is used as an instrument for contracting risk coverage in accordance with the Company's risk management policies.

a) Fuel price risk and availability

In order to manage risks resulting from the price changes in aircraft fuel, GOL uses derivative financial instruments to measure oil price changes represented by *futures and commodities options contracts*. The oil prices are extremely linked to aircraft fuel, which makes oil derivatives efficient in the compensation of aircraft fuel price fluctuations, providing a short-term hedge against a sharp increase in the average fuel price.

The Company makes use of oil swap and options. The Company records its derivative instruments related to fuel hedge as cash flow hedges, according to SFAS 133. The fair value of the Company's fuel derivative instruments at June 30, 2005 corresponded to an unrealized net gain of approximately R\$2,223.

In the quarter ended June 30, 2005, the Company recognized in the financial result a gain of R\$1,097 with derivatives measured as non-effective.

At June 30, 2005, the Company held derivative agreements for the purchase of up to 270,000 barrels of oil, in the nominal value of US\$15.3 million, for a two month period, and the results from the transactions with such derivatives were not recognized as adjustments to the items which refer to the financial statements.

The fuel purchase is substantially made from a single supplier, which accounts for the supply of 95% of the annual fuel consumption.

b) Exchange risk

At June 30, 2005, significant assets and liabilities in foreign currency are related to aircraft leasing operations. The installments relating to renegotiated lease agreements are recorded under current and long-term liabilities.

**08.01 - COMMENTS ON THE CONSOLIDATED PERFORMANCE IN THE
QUARTER**

08.01.1 - Analysis of the Consolidated Performance of GOL Linhas Aéreas Inteligentes (US GAAP)

MANAGEMENT'S COMMENTS ON 2Q05 RESULTS

GOL's performance in the second quarter of 2005 demonstrated the Company's ability to grow capacity significantly while maintaining profitability, even during periods of extremely high fuel prices. GOL remains committed to its virtuous cycle of maintaining low costs, allowing us to offer the lowest fares and achieve the highest load factors in the Brazilian market, thereby driving industry-leading profitability, commented Constantino de Oliveira Junior, GOL's CEO. Mr. Oliveira added, "Through the addition of aircraft and flight frequencies during the quarter, GOL significantly increased its domestic market share to 29% and achieved a position as the second-largest domestic airline in Brazil.

GOL's results in the second quarter of 2005 were in line with the guidance that the Company had articulated to the market. GOL continued to show the highest load factors in the Brazilian market and the highest aircraft utilization in the world, while maintaining market cost leadership. During the quarter, GOL's load factor increased 3.7 percentage points to 73%, aircraft utilization remained at 14 block hours per day, while operating costs decreased, excluding fuel.

Jet fuel per available seat kilometers (ASK) increased 33% year-over-year and accounted for a 9%, or \$1.3 cents (R\$) per ASK, increase in GOL's operating cost per seat kilometer (CASK) to 15.5 cents (R\$). GOL's non-fuel CASK, at 9.2 cents (R\$), showed significant improvement. Non-fuel CASK decreased 3% in the year-over-year comparison, despite a 49% 2Q05 increase in employees in preparation for our planned 65% capacity expansion in 2H05, a 5.8% inflation adjustment on salaries effected in 4Q04, provisions for employee profit sharing, a 46% increase in fleet size, and a 26% increase in average landing fees.

Cost reductions were driven by increased productivity, reductions in sales expenses and a 19% Brazilian Real appreciation. The 33% increase in fuel CASK contributed to the 8% reduction in operating profits. Fuel-neutral operating income increased 38% in the year-over-year comparison. Using 2Q04 fuel costs, pro-forma operating income was R\$128mm in 2Q05, representing a 23% operating margin. The Company has hedged approximately 55% of its short-term fuel price exposure for 3Q05. Our absolute market cost leadership, represented by a stage-length adjusted CASK more than 30% lower than our closest competitor, is key to our virtuous cycle, and allows us to provide the lowest fares and the best customer value proposition in the market, commented Richard Lark, GOL's CFO.

In terms of future perspectives, besides maintaining high levels of productivity and profitability, short-term growth will be driven by the addition of new aircraft, new destinations and new frequencies in existing routes. The addition of

eight Boeing 737 aircraft to the fleet in the second half of 2005 will increase seat capacity by 65% year-over-year.

GOL remains committed to its strategy of profitable expansion through a low cost structure and high quality customer service. We are very proud that more than 30 million customers have chosen to fly GOL, and we continue to make every effort to offer them the best in air travel: new planes, frequent flights in the main markets, an ever-expanding route system and lower prices; all of which is delivered by our dedicated team of employees who are key to our success," stated Mr. Oliveira. By remaining focused on our business model, while continuing to grow, be innovative and provide the lowest fares, we will further create value for our customers, employees and shareholders.

REVENUES

Net operating revenues, 93% of which are revenues from passenger transportation, increased 40.3% to R\$524.5mm, primarily due to higher revenue passenger kilometers (RPK), offset by lower yields. RPK growth was driven by a 38% increase in departures, as well as an increase in load factor from 68.9% to 72.6% . RPKs grew 57.3% to 2,239 million, and revenue passengers grew 45.9% to 3.1 million.

Average fares decreased 3.6% from R\$181 to R\$175, principally due to our March fare re-alignment. Yields declined 11.0% to 23.40 cents (R\$) per passenger kilometer, due to our focus on reducing fares, as well as increased price competition during the quarter due to the end of the TAM-Varig code share (which had been in effect since 2003).

Complementing net operating revenues, cargo transportation activities primarily contributed to the expansion of other operating revenues, which increased from R\$11.7mm to R\$37.7mm.

The 49.4% year-over-year capacity expansion, represented by ASK, facilitated the addition of 52 new flight frequencies (including 26 night flights) and one new destination in 2Q05. The addition of an average of four operating aircraft during the quarter (from 22 to 32 aircraft in the year-over-year comparison) drove the ASK increase.

Operating revenue per available seat kilometer (RASK) decreased 2.4% from R\$18.67 cents in 2Q04 to R\$18.22 cents in 2Q05.

The growth in RPKs resulted in a higher domestic market share for GOL, reaching 29% in the end of 2Q05, compared to 22% in the end of 2Q04. Through its first regular international flights to Buenos Aires, Argentina, GOL achieved an international market share of 2% in the same period. Approximately 5% of GOL's total RPKs were related to Brazil-Buenos Aires passenger traffic.

OPERATING EXPENSES

Operating expenses per ASK decreased by 2.7%, excluding fuel, in the quarter. Total CASK increased 9.0%, to 15.5 cents (R\$), primarily as a result of increases in aircraft fuel expenses per ASK, partially offset by a higher productivity and by a greater dilution of our fixed costs over a higher number of ASKs. Total operating expenses increased

63%, reaching R\$477.2mm, due to extremely high fuel prices and the expansion of our operations (fleet and headcount expansion, a higher volume of landing fees and marketing activities). Over the quarter, fuel price increases led to an increase of R\$95.5mm in operating expenses. Breakeven load factor increased from 54% to 62%.

Results from GOL's operating expense (jet fuel and USD-related) hedging programs are accounted for in accordance with SFAS 133 (*Statement of Financial Accounting Standard No 133*), Accounting of Derivatives and Hedging Activities.

Salaries, wages and benefits expenses per available seat kilometer (ASK) increased 25.3% to 1.83 cents (R\$) due to a 5.8% inflation adjustment on salaries in 4Q04, a R\$4.5mm provision for our employee profit sharing program (2004 profit sharing was expensed in 4Q), and to a 49.1% increase in the number of full-time equivalent employees, from 2,685 to 4,002, related to capacity expansion.

Aircraft fuel expenses per ASK increased 32.8% over 2Q04 to 6.24 cents (R\$), due to higher fuel prices per liter. The average fuel cost per liter increase of 20% compared to 2Q04 was primarily due to the 39% increase in the international price for crude oil (WTI), partially offset by the 19% Brazilian Real appreciation. GOL's hedging program, in conjunction with its fuel efficient fleet and intelligent yield management, has helped to mitigate against increases in jet fuel prices. The Company has hedged approximately 55% of its fuel requirements for 3Q05.

Aircraft rent per ASK decreased 15.5% to 2.02 cents (R\$) in 2Q05 primarily due to a high aircraft utilization rate (14 block hours per day), and a 19% appreciation of the Brazilian Real during the period. GOL's high aircraft utilization rates are attributable to our standardized fleet, which reduces complexity and turnaround times, and allows an increase in the number of daily flights per aircraft and a 24-hour per day utilization for over 25% of the fleet.

Aircraft insurance expenses per ASK decreased 17.2% due to a reduction in average premium rates, the 19% appreciation of the Brazilian Real against the US dollar, and a higher aircraft utilization rate.

Sales and marketing expenses per ASK decreased 1.9% to 2.55 cents (R\$) primarily due to reductions in sales commissions. GOL booked a majority of its ticket sales through a combination of its website (78% during 2Q05) and its call center (9% during 2Q05).

Landing fees per ASK increased 7.8% to 0.69 cents (R\$), due to a 38% increase in departures and a 26% increase in average landing tariffs.

Aircraft and traffic servicing expenses per ASK decreased 31.2% to 0.64 cents (R\$), as a result of higher productivity and reduced costs of third-party service contracts.

Maintenance, materials and repairs per ASK increased 100.0% to 0.34 cents (R\$), primarily due to a one-time insurance re-imburement in 2Q04 for extraordinary repair services performed in 1Q04 on aircraft GOO, offset by the 19% appreciation of the Brazilian Real.

Depreciation per ASK was 0.27 cents (R\$), an 17.4% increase, due to a higher volume of fixed assets, particularly spare parts inventory and, to a lesser extent, the increase of our technology equipment, due to our expansion of operations.

Other operating expenses per ASK were 0.64 cents (R\$), a 16.9% decrease when compared to the same period of the previous year, due to higher productivity.

COMMENTS ON EBITDA AND EBITDAR¹

The impact of a CASK increase of 1.28 cents (R\$) and a 0.45 cents (R\$) RASK decrease, resulted in a reduction of EBITDA per available seat kilometer from 4.72 cents (R\$) in 2Q04 to 3.03 cents (R\$) in 2Q05. GOL was 100% hedged on USD operating expenses in 2Q05, which resulted in R\$20mm of operating losses recorded in accordance with SFAS 133. Excluding hedge results, our EBITDA was positively affected by the 49.4% increase in operating capacity, and totaled R\$113.2mm compared to R\$97.6mm in 2Q04.

¹EBITDA (earnings before interest, taxes, depreciation and amortization) and EBITDAR (earnings before interest, taxes, depreciation, amortization and rent) are presented as supplemental information because we believe they are useful indicators of our operating performance and are useful in comparing our performance with other companies in the airline industry. We usually present EBITDAR, in addition to EBITDA, because aircraft leasing represents a significant operating expense of our business, and we believe the impact of this expense should also be considered. However, neither figure should be considered in isolation, as a substitute for net income prepared in accordance with US GAAP, BR GAAP or as a measure of a company's profitability. In addition, our calculations may not be comparable to other similarly titled measures of other companies.

Aircraft rent represents a significant operating expense for GOL. As GOL leases all of its aircraft, we believe that EBITDAR (equivalent to EBITDA before aircraft rent expenses) is an important measure of operating performance. On a per available seat kilometer basis, EBITDAR was 5.05 cents (R\$) in 2Q05, compared to 7.11 cents (R\$) in 2Q04. EBITDAR amounted to R\$155.7mm in 2Q05, compared to R\$146.9mm in the same period last year.

FINANCIAL RESULTS

Interest expense increased R\$2.4mm due to a higher amount of short-term working capital debt, related to increased operations, and a negative variation on dollar-denominated deposits (a non-cash effect). Financial income increased R\$13.1mm, primarily due to a R\$187.1mm increase in cash balances.
