ANGLOGOLD LIMITED TRADING STATEMENT AND CAUTIONARY ANNOUNCEMENT

AngloGold will announce its results for the quarter ended 31 March 2004 on 29 April 2004.

AngloGold advises that it expects adjusted headline earnings ¹ for the three-month period ended 31 March 2004 to be materially below adjusted headline earnings ¹ for the three-month period ended 31 December 2003. In terms of the JSE Securities Exchange Listings Requirements, material is defined as a movement between 10% and 30%.

AngloGold also expects that earnings will be below the consensus analysts' forecast for the three-month period ended 31 March 2004.

It is anticipated that gold production for the first quarter of 2004 will be 11% below that of the previous quarter. This lower production is broadly in line with AngloGold's expectations and has these major causes:

- The normal and expected slow production start to the first quarter following the year-end shut down in South Africa;
 - Anticipated lower grades at the Geita operation in Tanzania, following the unusually high grades reported in the last quarter of 2003;
 - Reduced production at Morila in Mali, as a result of lower ore throughput and grade. Throughput is expected to increase with the commissioning of the plant extension; and
 - Lower production at the Cerro Vanguardia mine in Argentina, due to a planned reduction in ore throughput.
- ¹ Headline earnings before unrealised non-hedge derivatives and fair value gains (losses) on interest rate swaps.

Disclaimer

Except for the historical information contained herein, there are matters discussed in this news release that are forward-looking statements. Such statements are only predictions and actual events or results may differ materially. For a discussion of important factors including, but not limited to development of the Company's business, the economic outlook in the gold mining industry, expectations regarding gold prices and production, and other factors, which could cause actual results to differ materially from such forward-looking statements, refer to the Company's annual report on the Form 20-F for the year ended 31 December 2003 which was filed with the Securities and Exchange Commission on 19 March 2004.

The earnings variation is also, in part, the result of an abnormal tax credit of \$7 million in the previous quarter.

Management expects that AngloGold (excluding Ashanti) will meet its production forecast for 2004 of 5.3 million ounces, as published in the Annual Financial Statements. The total cash cost and capital expenditure projections in that forecast were based on an exchange rate of \$1=R7; the exchange rate for the March quarter was \$1=R6.76.

Shareholders are advised to exercise caution when dealing in the Company's securities until the publication of the Company's results for the three months ended 31 March 2004.
