## 1. INTRODUCTION

The purpose of this Institutional Policy for Corporate Risk Management is to introduce risk evaluation practices in the corporate environment and help improve corporate governance and business planning while preserving and generating value for the organization.

The corporate risk management process is based on the Committee of Sponsoring Organizations of the Treadway Commission's Enterprise Risk Management Framework 2004, ABNT NBR ISO 31000: 2009, and ABNT ISO GUIA 73: 2009.

## 2. PURPOSE

- 2.1. Determine corporate risk management guidelines, concepts and competences.
- 2.2. Incorporate risk vision into decision making in line with best practices in the market.
- 2.3. Add value to the organization, make information more transparent, improve governance practices and help make the company sustainable.
- 2.4. Spread risk management culture and take action on all of the organization's hierarchical levels using plain language.

## 3. GUIDELINES

- 3.1. Business strategy and work processes must address risks and risk management.

- 3.2. Risk management culture must involve all of the company's hierarchical levels.
  - 3.3. Employees involved in risk management activities must be trained in the methodology used.
  - 3.4. Process risks must be identified, evaluated, communicated, treated and monitored as an opportunity for improvement
  - 3.5. Risks must be evaluated and monitored by the Board of Directors, Audit Committee, Executive Board, Corporate Risk Management Committee, Departments, Superintendencies and Business Units
  - 3.6. Corporate risk management must involve all areas of the company, using plain language and established policy and procedural standards.
  - 3.7. All risk exposures must be evaluated, their treatment decided and, if necessary, action plans devised, while identifying persons responsible and risk monitoring indicators.
  - 3.8. Risk management must be periodically improved by frequent evaluation and review cycles or in response to specific events, thus favoring continuous improvement and strengthening strategic business guidelines.
  - 3.9. The company must use the results of risk evaluations to prepare and / or review contingency plans.
  - 3.10. Corporate risks must be reported to stakeholders at the Company's discretion, through the appropriate channels aligned with legislation and good corporate governance practices.
  - 3.11. Responsibilities for approval and treatment of risk are defined by levels of risk (impact and likelihood of occurrence).
  - 3.12. Risks must be classified by nature, category and origin of events (internal or external) defined in business procedure

Description

<b>Risk level</b>	Financial magnitude representing the exposure of risk impact, in the broadest sense, that allows the organization to make decisions related to risk management activities.
<b>Periodic improvement</b>	Associated activities to ensure the efficacy of risk management through frequent evaluation and review cycles, favoring continuous improvement and strengthening strategic objectives.
<b>Risk evaluation</b>	Evaluation process that enables an organization to consider the extent to which potential risk factors may impact its attainment of objectives. Management evaluates events based on two perspectives - probability and impact - and generally uses a combination of qualitative and quantitative methods.
<b>Good Practices for</b>	Publicly-recognized guidelines to achieve and maintain transparency, equity and quality of information, as well as maintaining a positive reputation in the market and a differential in value preservation and generation.
<b>Corporate governance</b>	Rates risks by their impact and probability as shown by different colors on a risk map. SABESP's risk rating rules:  a) Impact: High (red), Significant (orange), Moderate (yellow), Low (light green) and Minimal (dark green);  b) Probability: Almost certain (red), Probable (orange), Possible (yellow), Low (light green) and Improbable (dark green).
<b>Risk classification</b>	
<b>Corporate Risk Management</b>	This process is conducted by an organization's board of directors, audit committee, executive board, corporate risk management committee, superintendences, business units and other employees; applied to strategies formulated to identify potential events within the organization that are capable of affecting it, and manage risks in order to keep them compatible with the organization's risk exposure and provide reasonable assurance that it will achieve its objectives. Risk management is directly related to sustainable growth, profitability, and preserving and generating value for the company and its shareholders, since this process allows it to detect not only threats but also opportunities to improve and develop the business.

<b>Risk identification</b>	Risk search, recognition and description processes. Identifying risk involves describing factors and potential consequences, thus drawing up a comprehensive list of risks (portfolio) based on events that may create, boost, prevent, reduce, accelerate or delay efforts to reach objectives. Risk identification may involve historical data, theoretical analyses, opinions compiled by informed persons and experts, and stakeholders' needs.
<b>Impact</b>	Result or effect of a risk event. There may be a number of possible impacts associated with an event. The impact of an event may be positive or negative in relation to the related objectives of a company.
<b>Risk map</b>	Graphical representation of the risk evaluation process in the corporate environment. Risks are shown graphically on a 5 X 5 map layout, by positioning the level of the risk in a quadrant with a corresponding color. Shown on the Cartesian plane by ordered pairs (Probability and Impact):  X-axis: Probability: Almost Certain (red), Probable (orange), Possible (yellow), Low (light green) and Improbable (dark green);  Y-axis: Impact: High (red), Significant (orange), Moderate (yellow), Low (light green) and Minimum (dark green).
<b>Risk Management Methodology</b>	A set of definitions of standards for risk identification, analysis, evaluation, treatment and monitoring, based on flexibly applying the COSO model ("Enterprise Risk Management - Integrated Framework") to Sabesp's characteristics, particularities and business environment.
<b>Monitoring</b>	Continuously checking, supervising, critically observing or identifying situations in order to characterize any changes in performance levels that may be required or expected. Monitoring may be applied to risk management structure, the management process, risk as such or risk controls.
<b>Level of authority</b>	The organization's management decision-making level related to risk management activities, depending on level of criticality (impact and probability) shown on the risk map.
<b>Stakeholder</b>	Includes Board of Directors, Audit Committee, Executive Board, Corporate Risk Management Committee, Department Heads, Superintendents, Executive Assistants, Advisors and other employees that may affect, be affected, or see themselves involved in decisions on risk management activities.

**FORWARD-LOOKING STATEMENTS**

This press release may contain forward-looking statements. These statements are statements that are not historical facts, and are based on management's current view and estimates of future economic circumstances, industry conditions, company performance and financial results. The words "anticipates", "believes", "estimates", "expects", "plans" and similar expressions, as they relate to the company, are intended to identify forward-looking statements. Statements regarding the declaration or payment of dividends, the implementation of principal operating and financing strategies and capital expenditure plans, the direction of future operations and the factors or trends affecting financial condition, liquidity or results of operations are examples of forward-looking statements. Such statements reflect the current views of management and are subject to a number of risks and uncertainties. There is no guarantee that the expected events, trends or results will actually occur. The statements are based on many assumptions and factors, including general economic and market conditions, industry conditions, and operating factors. Any changes in such assumptions or factors could cause actual results to differ materially from current expectations.
