Edgar Filing: Qimonda AG - Form 6-K

This Report on Form 6-K contains the following press releases of Qimonda AG, which are hereby incorporated by reference into the Registration Statement on Form F-3, Registration No. 333-145983:

February 3, 2009 Continuing development of Buried Wordline Technology and streamlining production capacities, including ramp down of the Richmond 300mm facility.

February 3, 2009 Presenting the world's smallest DRAM chip based on its advanced Buried Wordline Technology, awarded as DDR3 market leader by Intel.

February 10, 2009 Cutting costs by reduction wafer starts at Dresden facility and improving productivity due to progress in development of 46nm Buried Wordline Technology.

News Release § Presseinformation

Qimonda pushes ahead with the development of its innovative Buried Wordline Technology and streamlines production capacities.

Munich February 3, 2009 Qimonda AG (OTC: QMNDQ.PK) is making consistent advances in its orientation towards its Buried Wordline technology. After seeing the first generation with a size of 65nm achieve good results in mass production in Dresden, the developers have now created the first operational DDR3 memory modules based on the latest 46nm technology.

The new 46nm technology will triple the number of chips per wafer compared with the current 75nm technology, and thus is expected to increase production efficiency by 200 percent. Furthermore, preliminary results show that power consumption will be reduced by up to 75 percent. We are confident that our new technology is the key innovation for us to move onwards into a lucrative future, says Thomas Seifert, CFO and COO of Qimonda AG. The first successful test runs with the new 46nm module generation and the customer feedback up to now have been very encouraging. Industry experts believe that this new generation of chip represents a clear advantage for Qimonda over the competition. The global market leader Intel Corporation also recently confirmed Qimonda's leading position in DDR3 technology.

The focus on Buried Wordline technology is therefore a key element of Qimonda's global restructuring and cost-reduction programme. At the same time, in order to stabilise its ongoing operations even further, loss-making products and contracts are

being discontinued and core production activities are being intensified. This is the reason that production will now be ramped down at the Richmond 300mm manufacturing facility, Virginia (USA). Given the current macroeconomic climate, it is not possible to finance a conversion of this facility for Buried Wordline technology production. In the future, more customers will be supplied with chips from the plant in Dresden. Approximately 1,500 employees are affected by this restructuring measure. Production at the other Qimonda AG facilities continues for the time being.

This is an essential step for us in order to improve our production efficiency and thoroughly orient Qimonda towards the next generation of memory, the innovative Buried Wordline technology, said Thomas Seifert, member of the management board of Qimonda. In addition, establishing the viability of the core development and production capabilities of the company is a critical first step in the search for new investors.

No final decisions have yet been taken concerning the future structure of the company, including whether those of its businesses that can be continued will be held through Qimonda AG or placed in a new company owned by new investors. In the latter case, or if investors cannot be found to finance the continuation of Qimonda's businesses, Qimonda AG would likely be liquidated.

About Qimonda

Qimonda AG (NYSE: QI) is a global memory supplier with a diversified DRAM product portfolio. The company generated net sales of Euro 1.79 billion in financial year 2008 and had prior to its announcement of a repositioning of its business approximately 12,200 employees worldwide, of which 1,400 were in Munich, 3,200 in Dresden and 2,800 in Richmond (Virginia, USA). The company provides DRAM products with a focus

New Release § Presseinformation

Qimonda presents world's smallest DRAM chip based on its advanced Buried Wordline Technology; Qimonda awarded as DDR3 market leader by Intel

Munich, Germany February 3, 2009 Qimonda AG (OTC: QMNDQ.PK) today announced first functional modules based on the smallest 2 Gigabit memory chip ever announced in the worldwide DRAM industry. The new 2 Gigabit DDR3 DRAM is based on Qimonda's leading 46nm Buried Wordline technology and has a die size of less than 55mm², translating into a significant improvement in productivity compared to today's technologies. Qimonda originally intended to start commercial production of the new chip by mid 2009 and is actively seeking financing partners to enable this timeline. Recently, Intel Corporation recognized Qimonda's leading position in DDR3 technology and awarded the company for its engagement.

Qimonda's 46nm technology will triple the number of chips per wafer compared to the current 75nm technology. At the same time, the chip is expected to significantly reduce power consumption by up to 75 percent in high-density DDR3 (Double Data Rate) modules. The new technology is the ideal platform to boost the market's conversion from DDR2 to DDR3 technology predicted for mid-2009. Qimonda's technology roadmap ideally complements this conversion.

With the first functional chips on 46nm, Qimonda shows the potential to regain technology leadership in the DRAM industry, said Kin Wah Loh, President and CEO of, Qimonda AG. The new 2 Gigabit DDR3 is expected to significantly increase our productivity and reduce our cost per bit once it is ramped up in production. In addition, the new chip is ideally suited for high-density DDR3 server modules and will put us in

the position of the energy efficiency leader in the market.

Intel Corporation recognized Qimonda's top position in DDR3 technology. Qimonda delivered DDR3 memory modules that are industry leading in performance and power allowing optimal system performance on Intel platforms, said Pat Gelsinger, Senior Vice President INTEL CORPORATION and General Manager, Digital Enterprise Group, during a recent award ceremony.

With today's announcement, Qimonda takes an important step towards establishing the viability of the core development and production capabilities of the company. This is a critical element of the search for new investors. No final decisions have yet been taken concerning the future structure of the company, including whether those of its businesses that can be continued will be held through Qimonda AG or placed in a new company owned by new investors. In the latter case, or if investors cannot be found to finance the continuation of Qimonda's businesses, Qimonda AG would likely be liquidated.

News Release § Presseinformation

Qimonda cuts costs and improves productivity

Reduction of wafer starts at Dresden facility

Progress in development of 46nm Buried Wordline technology

Munich/Dresden, Germany February 10, 2009 Memory supplier Qimonda today began a reduction in wafer starts at its facility at Dresden to about one quarter of the available capacity. With this move, Qimonda is responding to the negative market developments as well as to the necessity to cut back loss making businesses and safeguard liquidity.

At the same time, Qimonda has made further progress with the development of its 46nm Buried Wordline technology and has been able to improve yields of this new manufacturing process faster than originally expected.

We will reduce wafer starts at Dresden in order to reduce costs and safeguard liquidity. With this liquidity, we intend to expedite the development of our 46nm Buried Wordline technology, with which we can achieve market leading productivity and efficiency, said Frank Prein, General Manager of Qimonda Dresden GmbH & Co. OHG. The preliminary insolvency administrator and the creditors committee have agreed to this approach.

The reduction of wafer starts will have no immediate effect on deliveries to customers. Unused equipment will be placed in a standby mode and can be ramped-up again at short notice. The development of the new 46nm Buried Wordline technology, which makes possible an above-average leap in productivity and offers greater energy efficiency than peer products in the market, will be expedited without any reduction. We are convinced that in the current situation the successful productivity improvement is the

best way to convince potential investors that Qimonda has a future , said Thomas Seifert, CFO and COO of Qimonda AG. As soon as an investor is on board, Dresden can increase wafer starts again.

First talks with potential investors have already been held during recent days. However, it is still too early to make any assessment , according to the preliminary insolvency administrator, Dr. Michael Jaffé and Kin Wah Loh, President and CEO of Qimonda AG.

A solution involving new investors must be found by end of March in order to assure the continuation of operations at Qimonda. No final decisions have yet been taken concerning the future structure of the company, including whether those of its businesses that can be continued will be held through Qimonda AG or placed in a new company owned by new investors. In the latter case, or if investors cannot be found to finance the continuation of Qimonda s businesses, Qimonda AG would likely be liquidated.
